## PROJECTS

---

**Inventory Management** | Technologies Used: Java, Spring Apr 2025

- Built a console-based Product Management System using Java, Spring Boot, and MySQL. Implemented CRUD operations for managing products with attributes such as name, price, quantity, and category. Utilized Spring Data JPA for efficient and seamless interaction with the MySQL database. Designed a clean and modular service-repository architecture to ensure maintainable, scalable, and testable code. Handled user input and system feedback through the Java CLI using Scanner, along with proper exception handling to manage errors and provide clear warnings. Applied data validation and comprehensive error handling to ensure reliable and consistent product operations.

**Banking Console Application** | Technologies Used: Java, JDBC, MySQL Mar 2025

- The application allows users to perform basic banking operations such as account creation, balance inquiries, deposits, and withdrawals through a console interface. It includes full CRUD functionality and real-time transaction handling using JDBC for database connectivity.
