**Objective:** Looking for an organization which helps me to expand and use my knowledge and skills towards working in a collaborative environment, and which focuses on upskilling my skills in the workspace.

## PROFESSIONAL TRAININGS

---

**Itvedant:** Master in Full stack Web development with AWS (January 2024 - present)

It covers a wide range of topics, including web design, Python programming, SQL databases, Jira, and popular web frameworks like Django and Bootstrap.

## PROJECT

---

### Quiz Web Application

Developed a comprehensive and interactive quiz web application using Django, aimed at enhancing the learning experience for students and providing robust tools for instructors.

Key features include:

- **User Roles:** Implementing distinct functionalities for students and instructors.
- **User Profiles:** Maintaining detailed user profiles, including history of quizzes attended and scores.
- **Responsive Design:** Ensuring the application is fully responsive and accessible on various devices.

**Technologies used** – Django, Python, JavaScript, HTML, CSS, SQLite

### CineDataHarvest (June 2024)

- Demonstrated proficiency in Python, scraped data for approximately 1000 movies from website.
- Extracted relevant information such as release dates, movie titles, directors, genre, runtime, ratings & overview.
- Despite the challenge of inconsistent data placement, I organized the details into an Excel sheet.
- This project showcased my web scraping abilities, attention to detail, and proficiency in Python.

Git: [CineDataHarvest](#)

**Technology used** – Python, BeautifulSoup

### Hospital Management System

- This Python project leverages object-oriented programming (OOP) principles to create an efficient hospital management system.
- It allows the receptionist to manage various tasks efficiently. Example: admitting patients, display admitted patients, display doctors etc.
