-

Project Summary

- **Project Name** : Scheme Management System
 - **Team Size** : 5
 - **Technology Used** : Spring boot, Drool Tool
 - **Description** : It is web based application. From client server downloads the invoice file. Then will migrate code that reads the file so that will be able to save the data in database. Now drool is all about business logic for that we need drl file in web apps. Will apply the logic for discount calculation before converting it to drl file and saved that data into pojo class variable. With insert query again data saved into database with discount calculation. Now file migrate (code reads the data) using drool logic then with invoice updating to client server with help of Spring boot, maven drool tool.
