- .Net

Projects:

City Bazar Management System

Description: The "City Bazar Management System" is a software project developed for "City Bazar Gadhinglaj" to digitally manage marketplace operations. It streamlines product listings, sales, billing, and inventory, reducing manual errors and speeding up transactions. The system enhances the shopping experience for customers and simplifies tasks for shopkeepers and administrators. It includes customer management features to track purchase history and offer personalized deals. The billing system generates automated invoices and supports various payment methods, including cash, card, and online payments. Overall, it provides an efficient, user-friendly solution for managing the daily operations of a city bazar.

Tools:

- Net beans IDE 8.2
- MySQL Server
- Glassfish Server 3.1
- Jasper Report
