Work Experience

Tata Consultancy Services

System Engineer

04/2023 – present | Mumbai

Python Developer - Operating System Development Team

• Key responsibilities:-

- Contribute to the development of essential Python-based desktop utilities and applications that support the needs of the OS development team, specifically for Linux distributions.
- Integrated Python with **PyGtk** to create dynamic and interactive user interfaces.
- Handled RESTful APIs for efficient data retrieval and management.
- Developed and implemented dynamic UI elements based on real-time data.

• Achievements:-

- Designed and implemented a network booting application for various operating systems on a specific range of client machines.
- Improved OS applications performance by 38% by working on an Ubuntu 22.04 and Python3 migration project.
