Backend Developer

Highly motivated and detail-oriented backend developer with a strong foundation in technologies such as Java, Spring Boot, and Microservices. Proficient in building scalable and efficient server-side applications, RESTful APIs, and database management using MySQL. Adept at problem-solving and quick learning, with a passion for developing robust and secure backend systems. Experienced in implementing end-to-end solutions through hands-on projects, while continuously enhancing skills and staying abreast of industry trends. A collaborative team player, eager to contribute effectively to dynamic development teams and deliver high-quality software solutions.

WORK EXPERIENCE

TechnoElevate Pvt Ltd • Bengaluru • 07/2024 - 12/2024

Java Backend Developer

- Assisted in the development of RESTful APIs for geospatial polygon management, ensuring adherence to project requirements and industry best practices.
- Worked on backend services using Spring Boot and MySQL to support polygon creation, validation, and task management.
- Collaborated with senior developers to integrate Amazon S3 for storing .kml files, facilitating seamless geospatial data handling.
- Participating in debugging and troubleshooting efforts, resolving issues such as validation errors and API response mismatches.
- Documented API specifications and workflows, ensuring clarity for frontend integration and future development.
